

*Research and Ethics
in Agricultural and Resource Economics:
Publishing and Peer Review*

Ethics 1

Year 2

Anna Josephson & Jeffrey Michler

Congratulations! You wrote a paper and want to get it published.

Now what?

Where? Publishing Process

- Professional associations: American Agricultural Economics Association (AAEA)

- Universities

- For-profit publishing houses

WILEY

Springer

American Journal of Agricultural Economics (AJAE)

AJAE is the leading journal for agricultural economics. Five issues are published each year, including a proceedings issue. AAEA members receive free access to AJAE.

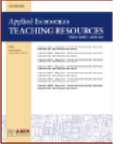

Applied Economic Perspectives and Policy (AEPP)

AEPP, formerly the Review of Agricultural Economics (RAE), publishes four issues per year. Each issue includes both featured articles and submitted articles. AAEA members receive free access to AEPP.

Applied Economics Teaching Resources (AETR)

The Applied Economics Teaching Resources (AETR) is a new, online, peer-reviewed publication series. The aim of this publication is to be an outlet for teaching scholarship, case studies, classroom games, and other teaching resources (e.g. experiential learning, pedagogy, etc.) that advances and supports the betterment of teaching and experiential learning in the field of applied economics, agricultural economics, agribusiness, and related fields.

Choices Magazine

Choices is the principal outreach vehicle of AAEA. Choices provides current coverage on economic implications of food, farm, resource or rural community issues directed toward a broad audience. Articles are peer reviewed. Choices is a free, online-only publication.

The Exchange

The Exchange is the bi-weekly electronic newsletter published by AAEA for its members. The content of the newsletter includes association announcements, membership news, and updates from the profession. All AAEA members are e-mailed a copy of The Exchange.

When ? Publishing Process

Preparing for submission

- McCloskey's rules
 - 12 "Avoid boiler plate"
 - 14 "A paragraph should have a point"
 - 15 "Make tables, graphs, displayed equations, and labels on images readable by themselves"
- Head's "Introduction formula"
- Presentation matters
- Revise, revise, revise

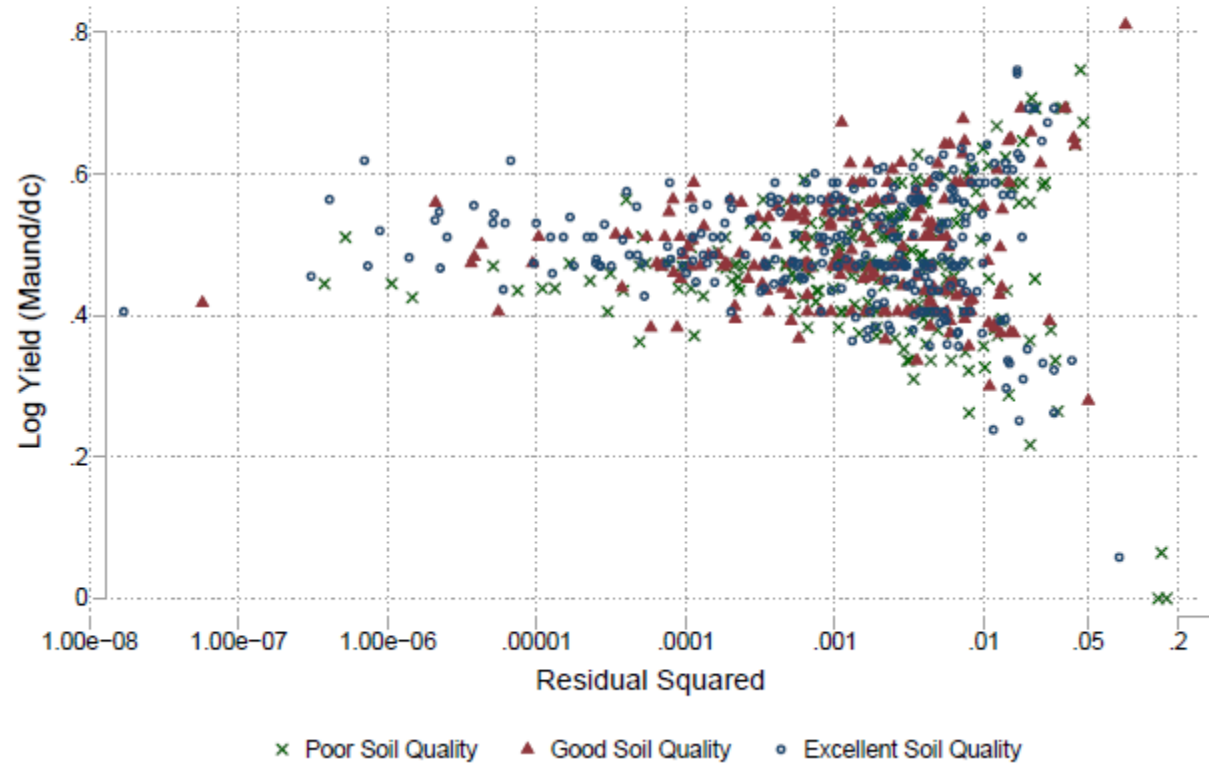

Table 7: Contract Choice and Alternative Categorization of Soil Quality

	(1)	(2)	(3)	(4)
<i>Panel A: Linear Effects</i>				
Punishment Rank	-0.123*** (0.027)	-0.096*** (0.028)	-0.120*** (0.028)	-0.094*** (0.028)
Good/Excellent Soil Quality	-0.066* (0.038)	-0.004 (0.037)		
Excellent Soil Quality			-0.097** (0.040)	-0.041 (0.043)
Village Controls	No	MC	No	MC
Observations	707	707	707	707
Log Likelihood	-299.7	-212.9	-296.8	-211.8
R^2	0.178	0.357	0.185	0.359
<i>Panel B: Non-linear Effects</i>				
Private Punishment	0.045 (0.040)	0.197* (0.102)	0.043 (0.042)	0.196* (0.104)
Economic Punishment	-0.119 (0.079)	-0.083 (0.080)	-0.111 (0.079)	-0.082 (0.080)
Social Punishment	-0.394*** (0.091)	-0.267*** (0.090)	-0.385*** (0.091)	-0.262*** (0.090)
Good/Excellent Soil Quality	-0.053 (0.036)	0.006 (0.035)		
Excellent Soil Quality			-0.089** (0.037)	-0.032 (0.040)
Village Controls	No	MC	No	MC
Observations	707	707	707	707
Log Likelihood	-288.3	-196.7	-285.3	-196.0
R^2	0.204	0.386	0.211	0.387

Note: Dependent variable is contract choice, where water contracts (fixed charge and two-part tariff) = 1 and output share crop contracts = 0. Panel A explores the linear effects of the variables of interest. Panel B allows for non-linearities by accounting for multiple categorical indicators. Each regression includes a set of well/project characteristics (if well is a shallow tubewell, pump horsepower, log of water table depth, log of time to irrigate, log of distance from well to plot, buyer discount rate, buyer and seller outside options, if buyer and seller are related, and if the seller has a good reputation). Cluster corrected robust standard errors are reported in parentheses (* $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$).

Figure 2: Yield Variance and Soil Quality

Note: The scatter plot is of the squared residuals from the regression presented in column (3) of Table A4 in the Appendix. Since squared residuals are clustered near zero, we use the logarithmic scale on the x -axis to provide visual separation in the graph. Residuals from plots with poor soil quality are denoted with an $\times$, residuals from plots with excellent soil quality are denoted with $\circ$, and residuals from plots with good soil quality are denoted with $\blacktriangle$.

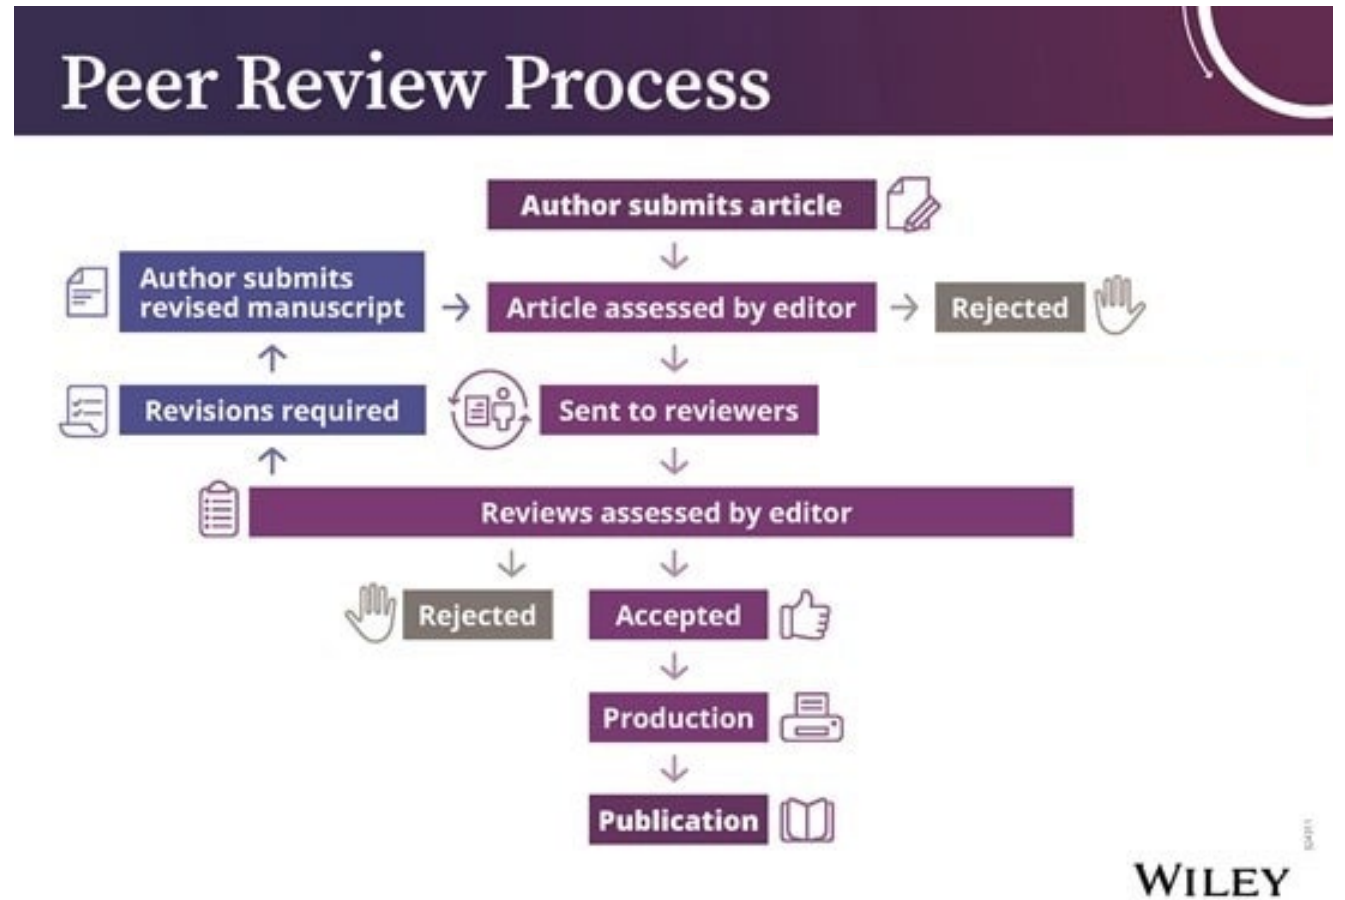

How? Publishing Process

Submitting to a journal

1. Select an appropriate outlet
2. Read the aims and scope of the journal - make sure you're familiar with what they're looking for, what they've previously published, etc.
3. Adapt for standards of journal
4. Make sure things are together - editing, bibliography
5. Submit a cover letter, if required
6. If you're rejected, started again. Might be rejected with comments or receive a ``desk reject'' which comes directly from the editor. If R\&R (revise and resubmit), then carefully address comments - and submit again. Publishing is full of rejection - and that's okay.

How? Publishing Process

- Submit your paper
- Peer reviewed
 - Single blind
 - Double blind
- Response
 - Reject
 - Revise and resubmit
 - Accept

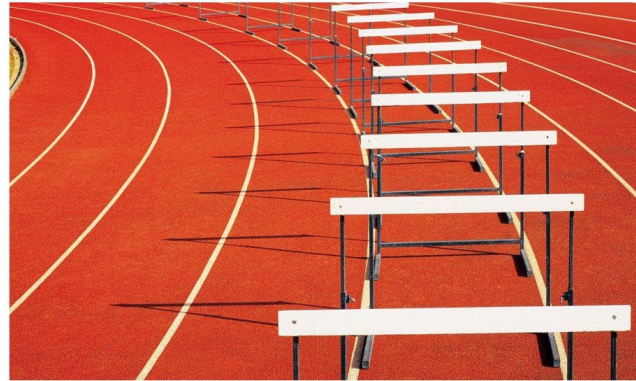

Who Me? Publishing Process

Peer Review

1. Receive invitation from editor for a specific article
2. Usually accompanied by a due date - make sure you hit this!
Publishing times are long - do your best to make sure that you do this service in due time.
3. Thoughtfully consider article and make recommendation for (1) accept, (2) various on revisions, and (3) reject.
 1. Lots can be said about being a good reviewer - share some resources.
 2. Above all: be quick and be helpful.
 3. Don't ask people to do ridiculous things, don't ask them to do things that aren't necessary. And don't recommend a revision if you don't see a clear path to publication *in the specific journal for which you are reviewing!*

What? Predatory journals and conferences

Credible journals

Peer review, Revisions, Rejections

Predatory journals

Greetings, We Adore Your Research!

- *Exploitative*, often open-access academic publishing that involves charging publication fees, without peer-review
- People are “tricked” into publishing into them, thinking they are reputable

Why? Predatory journals and conferences

- Incentives to publish and promote research strong
- Prey on lack of knowledge
- Researchers seeking more outlets
 - Reputable journals can publish about predation
 - Contemporaneous submissions

BEALL'S LIST OF PREDATORY JOURNALS AND PUBLISHERS

[PUBLISHERS](#)[STANDALONE JOURNALS](#)[VANITY PRESS](#)[CONTACT](#)[OTHER](#)

Potential predatory scholarly open-access publishers

Instructions: first, find the journal's publisher - it is usually written at the bottom of journal's webpage or in the "About" section. Then simply enter the publisher's name or its URL in the search box above. If the journal does not have a publisher use the [Standalone Journals](#) list.

All journals published by a predatory publisher are predatory, unless stated otherwise.

Original list

[GO TO UPDATE](#)

This is an archived version of the Beall's list - a list of potential predatory publishers created by a librarian [Jeffrey Beall](#). We will only update links and add notes to this list.

- [1088 Email Press](#)
- [2425 Publishers](#)
- [The 5th Publisher](#)
- [ABC Journals](#)
- [A M Publishers](#)
- [Abhinav](#)
- [Academe Research Journals](#)
- [Academia Publishing](#)
- [Academia Research](#)

[List of scholarly publishing stings](#)

Conferences

[Questionable conferences](#)

[How to avoid predatory conferences](#)

[Flaky Academic Conferences Blog](#)

How? Predatory journals and conferences

1. The journal does not have a formal editorial / review board.
2. The publisher has no policies or practices for digital preservation.
3. The publisher has a “fleet” of journals, and the home page for all appears the same.
4. The publisher doesn't share information or hides information about fees, offering to publish something ... and then sending an invoice.
5. The journal name does not reflect its origin.
6. The journal has a made-up measure of standing, e.g., “view factor” instead of impact factor.

How? Predatory journals and conferences

- Know it when you see it
- Aggressive solicitations
- Experience

1. Do you or your colleagues know the journal? Do you recognize the editorial board?
2. Can you easily contact the publisher?
3. Is the journal clear about their author submission process?
4. Is it clear what fees will be charged?
5. Are they promising a quick (2-3 month publication)?

Dear Dr. Josephson, Anna Invitation to Join Editorial Board

Today at 15:49

Dear Dr. Josephson, Anna,

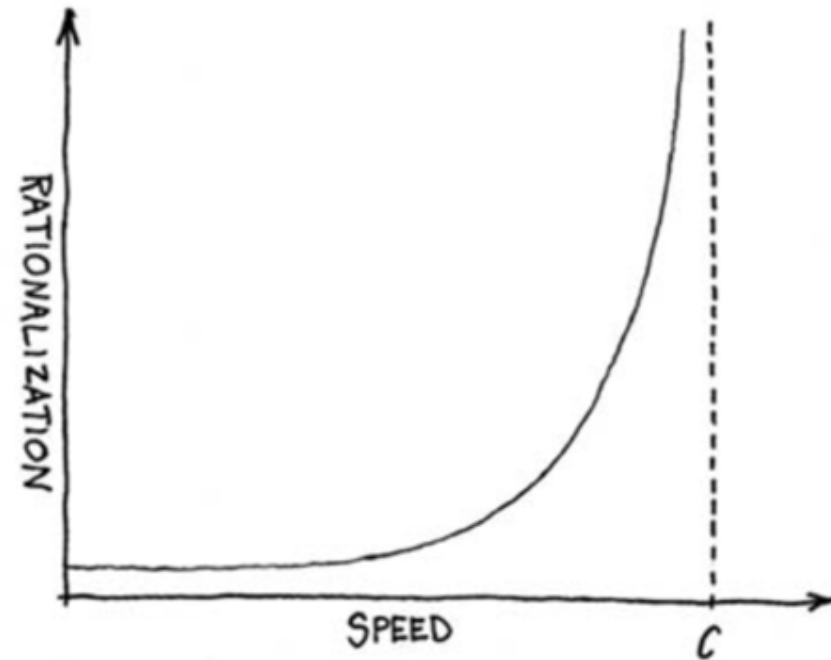

I hope you're having a great week!

We recently came across your article "Viewpoint: Beasts of the field? Ethics in agricultural and applied economics" in FOOD POLICY. It was an impressive read, and given your achievements and insights in this field, we would like to invite you to join us as an editorial board member of our new international journal, Journal of Management Science & Engineering Research.

We hope that you would consider our invitation. We look forward to hearing from

MORAL RELATIVITY

RELATED TO MORAL RELATIVISM, IT STATES THAT ETHICS BECOME SUBJECTIVE ONLY WHEN YOU APPROACH THE SPEED OF LIGHT. THAT IS, IT'S OK TO BE SELF-SERVING, STEAL, AND MURDER AS LONG AS YOU'RE GOING REALLY, REALLY FAST.
